Summary

Backend & AI Systems Engineer specializing in fullstack agentic workflows and automated decision systems. Combines robust Java enterprise backends with Python-based AI orchestration to build resilient, low-latency applications. Experienced in designing stateful agent architectures, tool-integration pipelines, and scalable microservices.

Experience

AI Agent Engineer

DB Klik — Surabaya, Indonesia. — July 2026 - Oct 2026

- Worked on a customer service AI agent to handle simple purchase flows for users.
- Automated actions through chatbot help simplify user's desired actions.
- Built MCP access for Human Relation software to **increase monitoring efficiency**.
- Rewrite negotiation agent to be a standalone agent to **decrease context window** on the company's main agent.

Full Stack Engineer

DB Klik — Surabaya, Indonesia — April 2026 - July 2026

- Developed and maintained a job portal using Laravel and PHP.
- Developed and plotted the AI ERP system with application to increase work efficiency through **automated systems**.

Personal Projects

CI/CD Flaky Error Agent

- IBM Bob 2.0 Hackathon submission that automates CI failures in Github Actions.
- Optimized for flaky errors with multi-agentic system each with their own focus: statistical failure rate analyst identifying **burst-failure patterns**, Time-of-Check to Time-of-Use (**TOCTOU**) delay-injection analyst identifying exact code locations where race conditions surface and **Test Order Dependency** analyst identifying global-state pollution, shared fixture leaks, and database contamination across test boundaries.

Athena, Personal Study Agent

- Sync study materials with Google Drive, create quizzes and goals / roadmaps to help student's studies.
- **Semantic chunking RAG** pipeline based agent with LanceDB and SQLite.
- LangGraph based system for quiz and goals creation.
